the purpose of this four volume series is to make available for
 college teachers and students samples of important and realistic
 applications of mathematics which can be covered in undergraduate
 programs the goal is to provide illustrations of how modern mathematics
 is actually employed to solve relevant contemporary problems although
 these independent chapters were prepared primarily for teachers in the
 general mathematical sciences they should prove valuable to students

teachers and research scientists in many of the fields of application as well prerequisites for each chapter and suggestions for the teacher are provided several of these chapters have been tested in a variety of classroom settings and all have undergone extensive peer review and revision illustrations and exercises are included in most chapters some units can be covered in one class whereas others provide sufficient material for a few weeks of class time volume 1 contains 23 chapters and deals with differential equations and in the last four chapters problems leading to partial differential equations applications are taken from medicine biology traffic systems and several other fields the 14 chapters in volume 2 are devoted mostly to problems arising in political science but they also address questions appearing in sociology and ecology topics covered include voting systems weighted voting proportional representation coalitional values and committees the 14 chapters in volume 3 emphasize discrete mathematical methods such as those which arise in graph theory combinatorics and networks
