part time racer and chicken farmer carroll shelby ordered a chassis from ac cars in england in 1961 and asked them to install a ford v8 engine in it the ac ace was fitted with the same rear diff as that used in the jaguar e type and so when the car arrived in the shelby workshop it proved easy to modify thanks to the simple ac layout

Opening Kaiser Wilhelm-Kanaal 1895

over the course of performance car history and specifically muscle car history big block engines are particularly beloved and for good reason not only are they the essence of what a muscle car is but before modern technology and stroker engines they were also the best way to make a lot of horsepower all of the detroit manufacturers had their versions of big block engines and ford was no exception actually ford was somewhat unique in that it had two very different big block engine designs during the muscle car era the fe engine was a design pioneered in the late 1950s primarily as a more powerful replacement for the dated y block design because cars were becoming bigger and heavier and therefore necessitated more power to move what started as torquey engines meant to move heavyweight sedans morphed into screaming high performance mills that won le mans and drag racing championships through the 1960s by the late 1960s the design was dated so ford replaced the fe design with the 385 series also known as the lima design which was more similar to the canted valve cleveland design being pioneered at the same time it didn t share the 1960s pedigree of racing success but the new design was better in almost every way it exists via ford motorsports offerings to this day in ford big block parts interchange ford expert and historian george reid covers both engines completely interchange and availability for all engine components are covered including cranks rods pistons camshafts engine blocks intake and exhaust manifolds carburetors distributors and more expanding from the previous edition of high performance ford parts interchange that covered both small and big block engines in one volume this book cuts out the small block information and devotes every page to the fe series and 385 big blocks from ford which allows for more complete and extensive coverage

the ingen input generator computer program has been developed as a preprocessor to simplify input generation for the cobra nc computer program ingen uses several empirical correlations and geometric assumptions to simplify the data input requirements for the cobra nc computer code the simplified input scheme is obtained at the expense of much flexibility provided by cobra nc for more complex problems requiring additional flexibility however ingen may be used to provide a skeletal input file to which the more detailed input may be added this report describes the input requirements for ingen and describes the algorithms and correlations used to generate the cobra nc input 9 refs 3 figs 6 tabs
