presented here is a detailed step by step guide to building a house model from scratch and transforming it into finished construction documents our book contains tips and tricks about how to go from a sketch to fully finished plans sections elevations and details each page is painstakingly designed to make it extremely clear how every step works this course was formulated from years of experience not only using sketchup in practise but teaching professionals and students from many different backgrounds written by an experienced architect who has used sketchup to design and project many types of jobs from a house extension to commercial office buildings it has been shaped by extensive practise of design and building some of the best professional workflows you ll find anywhere are contained within the course material learning the tools is fundamentally important but more than that we need to understand how tools and settings work together in the most effective way structured around a building project which was designed and project managed by the author the course details all the steps required to construct walls windows doors roof in a professional manner using correct naming procedures elements are organised according to best practise groups and components must be correctly located to be truly effective and a proper method for structuring elements is clearly outlined in a unique comprehensive graphic each concept is clearly documented including groups section cuts styles scenes or views perspectives vs orthogonal views tools are each used in a challenging context so that the reader gets an in depth understanding of how each works in practise pages are set out using ultra clear graphics which link each step with a visual reference our model is built up in a way that follows the real life construction process walls are laid out at the same time that floor slabs are formed windows are put in place inside the wall structure internal walls are constructed and doors are inserted finally the roof is created complete with rooflights the procedure for creating and locating component libraries is demonstrated the model then undergoes a process of section

cut placement scenes views are set up using the section cuts these constitute our plans sections and elevations textures are added to elements materials selection and creation is explained in detail following on from this is the creation of a construction detail based on the main model using a bespoke sketchup model environment the formation of a comprehensive 3d detail is illustrated complete with scenes once the model and its views have been prepared it is then ready to be placed into layout sketchup pro s graphics interface each scene is inserted into layout sized and scaled notes and graphics are applied using text callouts lines there is a unique section on creating a scaled 2d drawing in layout using the program s vector graphics in a way that is as clear as any 2d cad program the scrapbook menu is a means of swiftly importing graphics that are both pre loaded but can also be quickly added to procedures for creating our own graphics library is explained recommended sizes for text line weights and dimensions are illustrated each menu in layout is explained in detail there are five killer keystrokes included in the book these are shortcuts that have a massive impact on modelling time and convenience creation of shortcut keys is also explained in the introduction section there are explanations of sketchup s bim capabilities further details are linked on sketchup expert website and links to bim use cases are provided there is also a critique of 2d cad and why sketchup pro is better to use for traditional cad work sketchup has become the new de facto norm for architecture and design professionals there is simply no better way to illustrate design while translating into documentation

this book presents explorable xr environments their rationale concept architectures as well as methods and tools for spatial temporal composition based on domain knowledge including geometrical presentational structural and behavioral elements explorable xr environments enable monitoring analyzing comprehending examining and controlling users and objects behavior and features as well as

users skills experience interests and preferences the e xr approach proposed in this book relies on two main pillars the first is knowledge representation technologies such as logic programming description logics and the semantic web which permit automated reasoning and queries the second is imperative programming languages which are a prevalent solution for building xr environments potential applications of e xr are in a variety of domains e g education training medicine design tourism marketing merchandising engineering and entertainment the book s readers will understand the emerging domain of explorable xr environments with their possible applications special attention is given to an in depth discussion of the field with taxonomy and classification of the available related solutions examples and design patterns of knowledge based composition and exploration of xr behavior are provided and an extensive evaluation and analysis of the proposed approach is included this book helps researchers in xr systems 3d modeling tools and game engines as well as lecturers and students who search for clearly presented information supported by use cases for xr and game programmers as well as graphic designers the book is a valuable source of information and examples in xr development professional software and web developers may find the book interesting as the proposed ideas are illustrated by rich examples demonstrating design patterns and guidelines in object oriented procedural and declarative programming
